

Managed Prevention Outcomes

THE PERSONAL WELLNESS PROFILE®

The Managed Prevention Outcomes (MPO) service provides customized reports detailing associations found between an employee population's lifestyle, clinical and health data, workdays loss, work satisfaction and health risks as identified with the Spanish Personal Wellness Profile.

The **PWP** provide evidence-based health risk assessments, personal and administrative reporting, targeting of high risk individuals and groups, and an intervention program that allows you to assign follow-up programs.

A system of tools for proactive disease assessment and intervention.

SAVE TIME AND
MONEY...

Recent studies reveal that employees with more high-risk behavior will cost more in medical and pharmacy claims.

THE PWP report establishes specific goals which may help your company set corporate health promotion objectives.

1. Reduce Health Care Costs
2. Reduce Work Days Lost
3. Improve Employee Relations
4. Improve Health Data
5. Attract More Productive Personnel

All questionnaires are designed for fast and convenient scanning using an Optical Mark Reader scanner. In a health fair setting. It takes as little as three seconds to process a questionnaire, and less than one minute to print the report, which provides your Company with up-dated employee clinical data. Your Corporate Reports will be in your office in less than 72 hrs.

The PWP addresses the health interests of your employees. This gives your company an idea of what type of program will generate most participation.

The PWP Corporate Report will include the following employee data:

- △ Health Plan High Costs vs. Employees Risk Factors.
- △ Stress Warnings
- △ Sick Days
- △ Work Satisfaction
- △ Cancer Warning Signs
- △ Smoking Status
- △ Risk of Back Injury
- △ Coronary Risk
- △ Health Programs Interest

The PWP Health Risk Assessment is the most efficient computerized method of assessing your employees health status, needs and interests. The PWP will show the HR Director

where the Company is in the need of prioritizing a special health promotion intervention that can be periodically evaluated to prove Program effectiveness and health care cost. reduction.
